F O R E W O R D

This booklet has been compiled by the Production and Marketing Division of the P. E. I. Department of Fisheries and Labour in an effort to combine information that is often sought by various government agencies and the general public.

Readers are asked to forward any suggestions for future issues of the Statistical Review to the author.

STATISTICAL REVIEW OF PRINCE EDWARD ISLAND FISHERY

Prince Edward Island's fishing industry employs five thousand people, approximately three thousand in fishing and two thousand in processing. Many more are employed in industries which support the fishery such as outfitting and vessel construction. It is estimated that approximately $100 million is contributed annually to the P. E. I. economy from the primary and secondary sectors and support industries.

In 1984, landings of fish and seaplants decreased by 2,834,079 lbs to reach 113,604,724 lbs. The total landed value of all fishery products was $37.8 million, a decrease of 14.4% compared to the 1983 value.

The four categories of fish species are (1) groundfish, (2) pelagic and estuarial, (3) molluscs and crustaceans, and (4) marine plants.

Mollusc and crustaceans accounted for seventy-five percent of the total value of fishery landings in 1984 and 78% of the total value in 1983. The four main species of the Island fishery in 1984 with respect to landed value, were lobster, oysters, mixed moss and cod. Tuna, scallops, mackerel and flounder also contribute significantly to total fishery products.

Total groundfish landings in 1984 decreased to 42 million pounds representing a 7.5% decrease from 1983. The value decreased by 8.6% for a total of $4.5 million. With respect to the dominant groundfish species an increase has been recorded in redfish while decreases have occurred in landings of cod and hake. Flounder landings remained on par with those of 1983, with landings of 5.4 million pounds. Redfish landings, from the offshore fleet sector, increased by 5.2%, raising the landings from 15.8 million pounds in 1983 to 16.7 million pounds in 1984. The value of these landings also increased by 5.2 % showing a landed value of $ 1.8 million. Cod and hake landings showed declines with a decrease of 24.4% and 13.6 % respectively.

Landings of pelagic and estuarial fish decreased to 15.6 million pounds, a decline from 20.7 million in 1983. The value decreased by 7.9% giving a total of $ 3.3 million. A major factor for the decrease in landings was due to the herring fishery which decreased by 27.9 % dropping from 14.1 million pounds in 1983 to 10.2 million pounds in 1984. The value of these landings also decreased by 27.9 % to give a value of $1.0 million.

Silverside and smelt landings increased by 49.3% and 7.2% respectively, while the value of silverside landings more than doubled and the value of smelt landings increased by 42.8%. Mackerel showed a 18.3% decline both in landings and value. Eel landings declined from 447,938 pounds in 1983 to 289,302 pounds in 1984, showing a decline of 35.4 %. The value of eel landings also dropped significantly by 30.9 %. Although tuna landings decreased by 47.7 %, their value showed a remarkable increase of 22.2 % reaching $1.4 million.

Total mollusc and crustacean landing declined slightly for 1984, showing a decrease from 21.9 million lbs. in 1983 to 21.6 million lbs. in 1984. Landed value decreased by 17.4% dropping the value from $ 34.4 million in 1983 to $28.3 million in 1984. The lobster fishery experienced declines in landings from 1983, but there was improvement compared to 1982. Landings declined by 11.8% compared to 1983, giving a total of 13.6 million pounds. With respect to 1982's recorded figure,1984 had an increase of 12%. The value of the 1984 lobster landings decreased by 20.4 % from 1983 and increased by 2.4% over 1982. Oyster landings for 1984 increased by 39.1 % while their value increased by 57.5%. Bar clams increased by 691,476 Lbs. in 1984 showing a 73.2% increase over 1983's figures in both landings and value. Landings of softshell clams increased slightly by 6.7% while their value increased by 60.2%. Mussel landings and value both increased by 75 % while scallop landings and value declined by 48.5%. Quahaugs had a decrease in landings of 138,925 Lbs. and a decrease in value of $27,400.

Seaplant landings increased by 6 million pounds to reach 34.7 million for 1984 with a landed value increase of 21.0 % giving a total of $ 1.7 million.

A comparison of landings and values for the various categories is shown in the following tables.
